#### Remarks:

- General 1 **Terminalcodes:** where more terminals are active on one location, discriminating terminalcodes are being used.  
The second column contains the specific terminalcodes (alpha numeric positions: 5 - according to the standard).  
Sub standard terminalcodes are allowed for the time being. It concerns some terminals active since the pre-standard period.  
This modus operandi is the result of an agreement between logistical parties and the branch associations.  
If any mutation occurs to terminals with sub standard terminalcodes, these terminalcodes will be standardized immediately.
- 2 **Appointing of terminal names:** if known, the regular names of terminals are used.  
In some cases a location name appears in the column Terminal Name.  
This may happen when a terminal name is not known yet or in case the final identity of a terminal cannot be established with certainty.
- 3 **Depots:** not every depot in Rotterdam possesses its own kays. In cases like these the kay number represents the number of the actual kay where containers are handled  
e.g. ACC make use the cranes of Albatros company at kay 2600
- Remark = A At the request of Port Community Rotterdam terminals marked with "A" are recorded in this table. This concerns the depots at Delta Terminal in Rott  
The actual handling site is determined by the administrator of the depot. Kay numbers are generally not mentioned here.
- Remark = B Terminals marked "B" are recorded at the request of Port Community Rotterdam. This mainly concerns depots in the Eemhaven area.  
The actual handling site is determined by the administrator of the depot. Kay numbers are generally not mentioned here.
- Remark = C Entries marked "C" refer to specific port numbers concerning the kays subjected to the agreements with land based depots.

#### Explanation terminal type coding:

At the request of Rijkswaterstaat and BICS users this table is extended with a terminal type coding. The column "Type" may show following type code

- 0 No info - unspecified terminaltype
- 1 Container terminal
- 2 Tank terminal (liquid cargo)
- 3 Combined terminal (containers as well as liquid cargo)
- 4 Dry cargo terminal (bulk and general cargo)
- 5 Combined terminal (containers as well as other cargo)
- 7 Combined terminal (containers, liquid cargo and bulk cargo)
- 8 Not specified yet

Note: From version 10.4 the terminal code table includes container terminals (terminal type code 1) as well as tank terminals (terminal type code 2).  
In future versions of this table the container type codes are to be specified any further according to the actual situation.

MUTATIONS							
UNLocode	terminalcod	Terminal Name	Type	Place	Port	ort number	ort number
5 positions	5 positions				name or location	from	to
